

Checking the Temperature

If you have a thermometer outside, read it each day at the same time and mark the temperatures on the graph below.

**Which day was hottest?
Was it sunny that day?**

**Which day was coldest? Was it cloudy
that day? Was it windy that day?**

What season are we in now? (Summer, Autumn, Winter or Spring)

Hot												
Warm												
Cool												
Cold												
	January	February	March	April	May	June	July	August	September	October	November	December
	← Summer →		← Autumn →			← Winter →			← Spring →		← Summer →	

Above each month put a X (cross) in the row of the temperature that you think it would feel like during day. The seasons might help you decide.

Colour the hot row red, the warm row yellow, the cool row green and the cold row blue.

Draw a line to join up the X's (crosses).
